

accents **by** SIGCO™

Like the soothing refrain of a familiar song, Accents by SIGCO can add a touch of personal expression to your environment. SIGCO's premium back painted glass line brings fresh color and added flexibility to interior glass applications.

Designed specifically for interior use, Accents is very versatile and can be used in wall cladding, back splashes, counter and vanity tops, shelving, and in other innovative ways that can make your project extraordinary. Because the coating is moisture resistant, Accents is ideal for use in high humidity areas such as kitchens and bathrooms.

SIGCO's manufacturing process combines top quality materials with uniform finishing, creating a product like none other in the market. Manufactured by SIGCO using enhanced clarity low-iron glass as a substrate, Accents by SIGCO is coated on one side to lend an opaque effect and create colored glass that reflects interior light.

The glass can be cut, edged, drilled and tempered to easily fit your custom design plan. To protect the coated surface, the coated side of the glass should always be positioned against the surface to be covered. The Accents line is available in thicknesses from 1/4" to 1/2".
